

Week 2: Process Flexibility and Business Rules

## **Unit 1: Creating a Process Template**

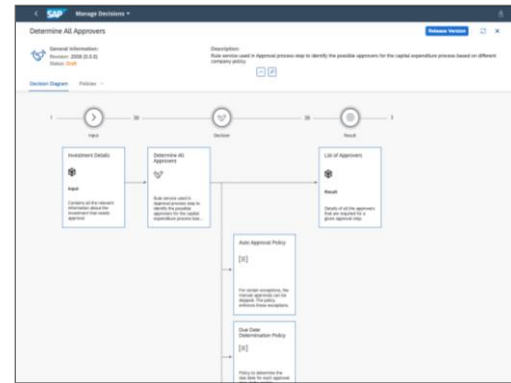

# Creating a process template

## Overview of key capabilities

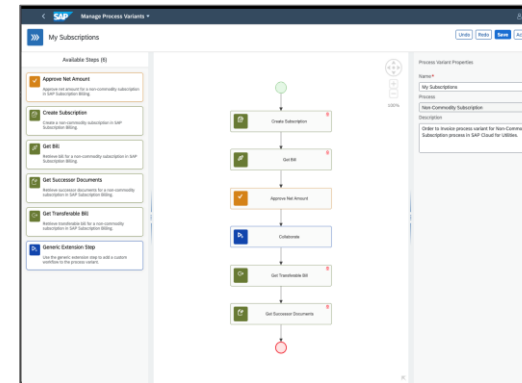

Workflow Editor  
(Low Code)  
Application Workflow

Application developer-  
focused workflow modeling  
and process automation

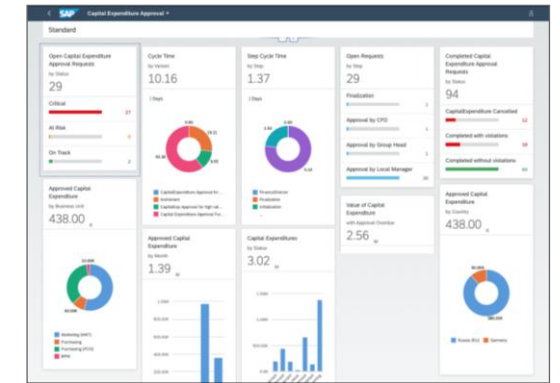

Business Rules (Low  
Code)  
Decision Management and  
Enterprise Rules Model

Integrated Business Rules  
Management to deploy  
into hybrid landscapes

Process Variant (No  
Code)  
Configuration UI for  
Business Experts

Process flexibility to  
configure variants of  
processes with pre-built  
content

Process Visibility Plug &  
Play  
Real-Time Workflow Visibility  
with XM Integration

Plug & Play Process  
Visibility with easy-to-  
configure dashboards and  
XM integration

**SAP Workflow Management** is a coherent cloud service offering combining **workflow**, **business rules**, **process visibility**, **process flexibility**, and **inbox**, complemented by **pre-built content packages**

## The nature of a process template

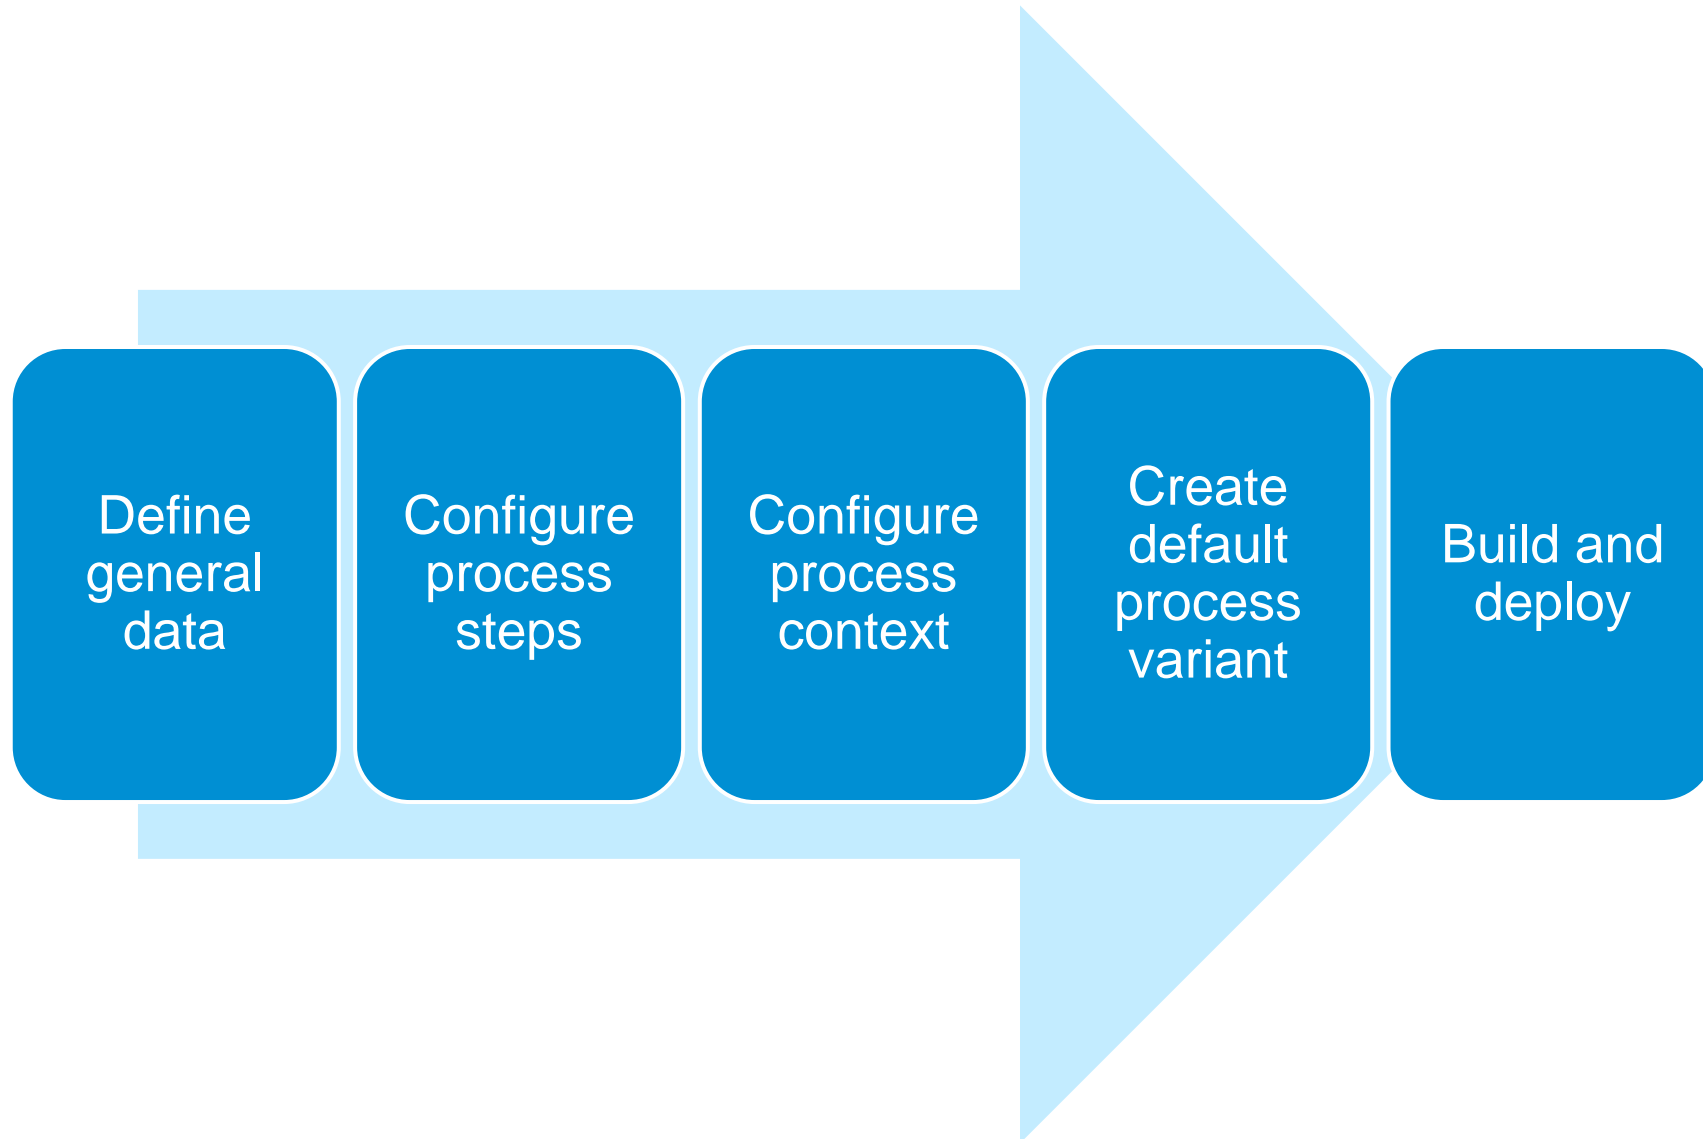

A process template contains **process steps** that are **used to configure different process variants**

It also contains

- **process context** for data mapping across process steps
- **process attributes** for identifying the process instance
- **monitoring KPIs**

## The steps to create a process template

## Creating a process template

### Key learnings

- What a process template is
- How to create a process template
- How to define step conditions
- How to create a default variant

Creating a process template

## What's next?

In the next unit, you'll learn:

- How to manage decisions with business rules

Creating a process template

## Further reading

- [SAP Help Portal: Model Process Templates](#)
- [SAP Community: SAP Workflow Management](#)

# Thank you.

Week 2: Process Flexibility and Business Rules

## **Unit 2: Managing Decisions with Business Rules**

Managing decisions with business rules

## Business rules in SAP Workflow Management

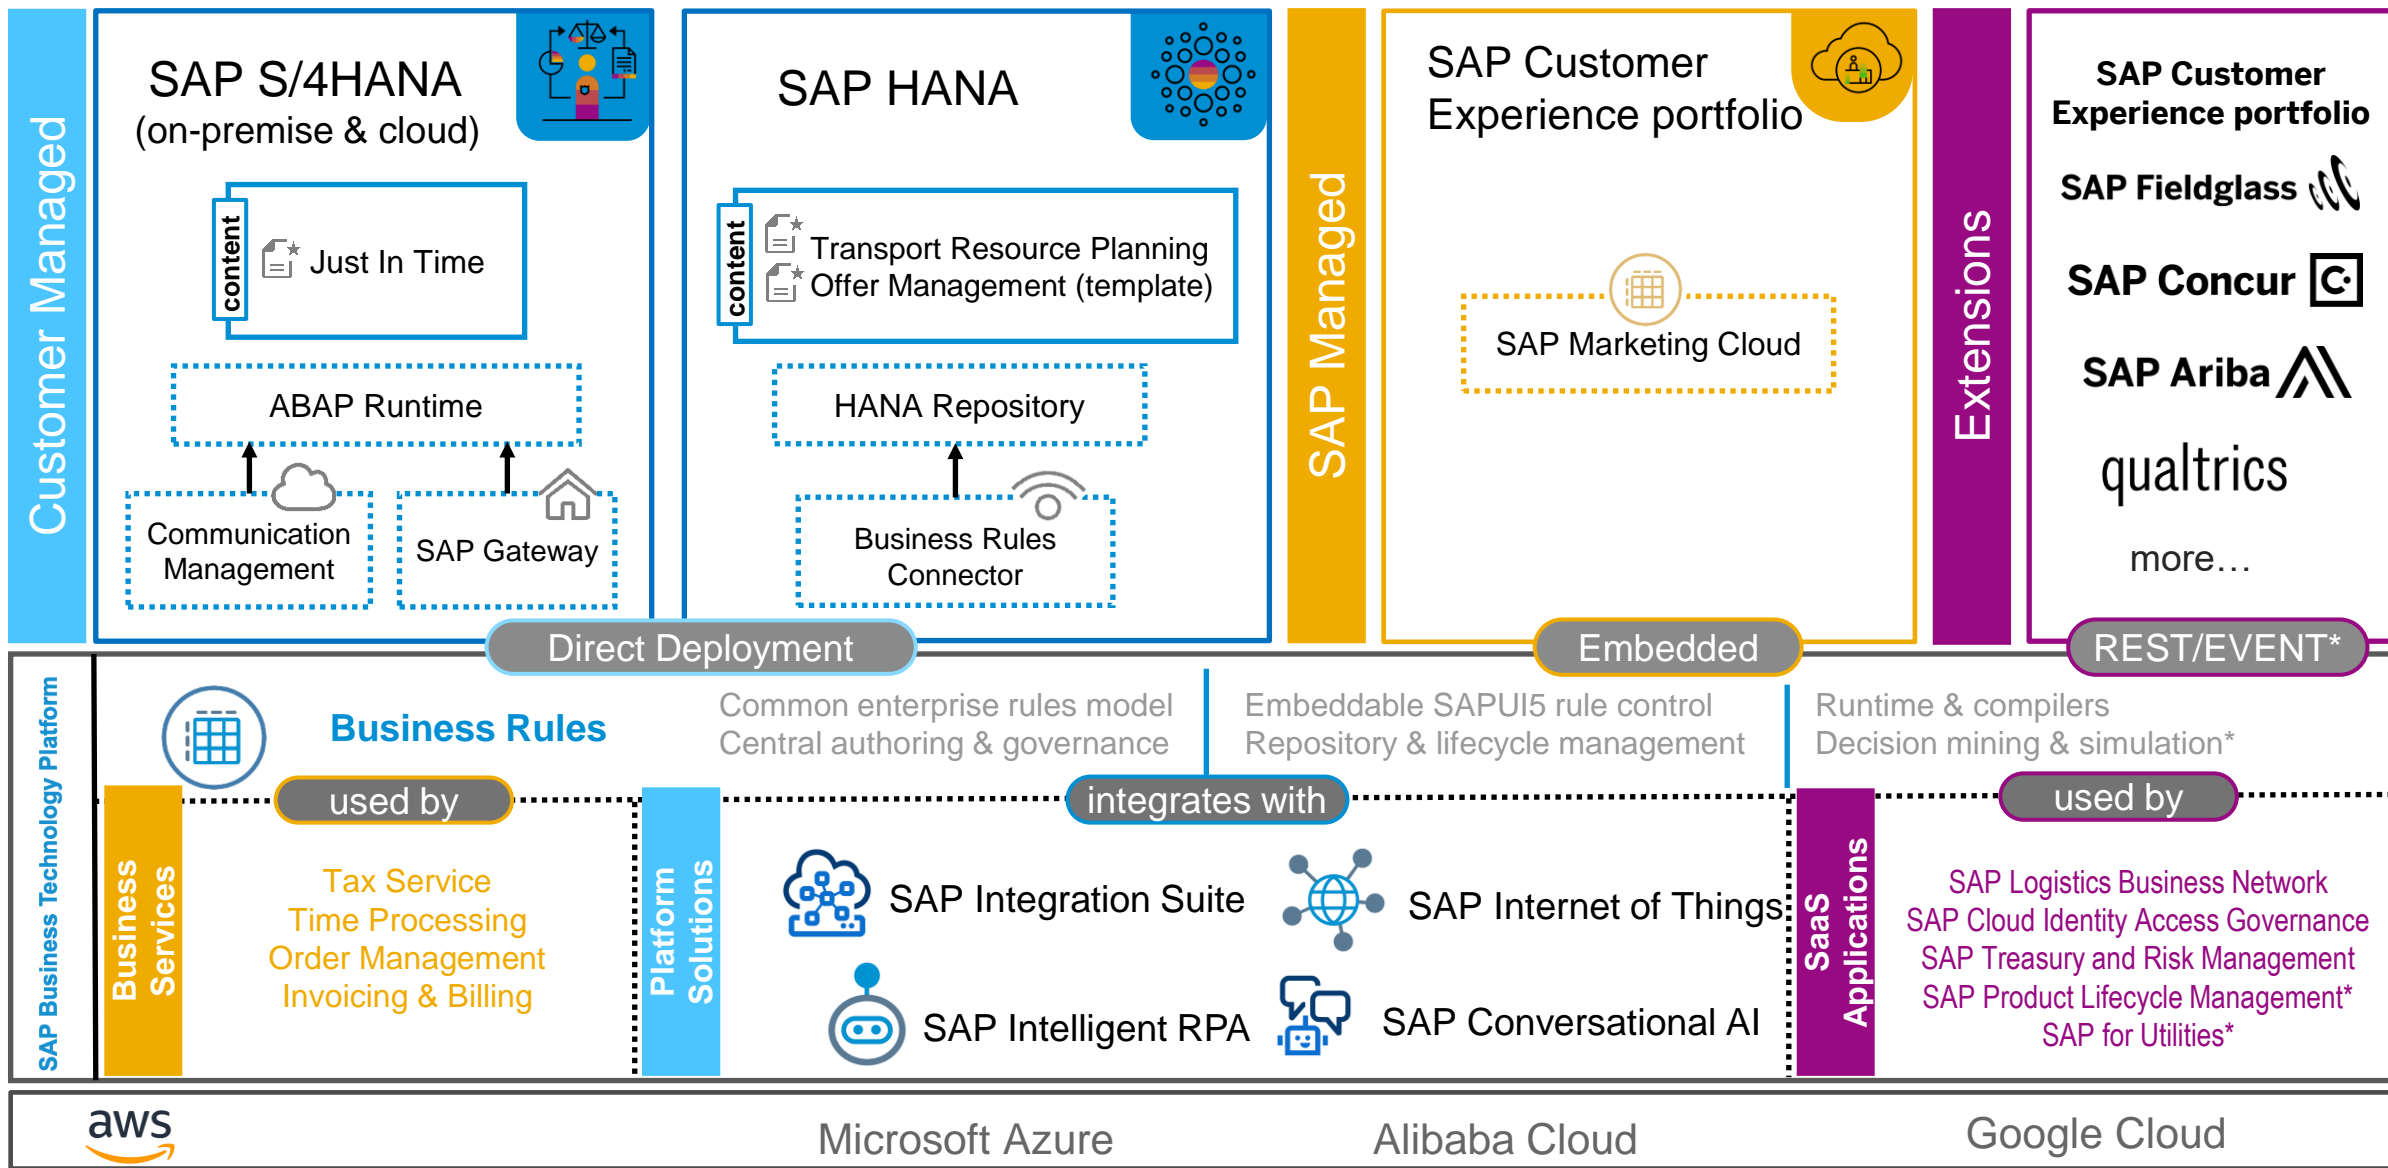

Encapsulates “**high-change decision logic**”  
from application logic

**Digitize and automate decision making** with  
business rules

Enable **centralized decision management**  
across the intelligent suite

## The bigger picture

## Enabling decision management across the Intelligent Enterprise

Empower users to automate and manage business logic independently from application development

Centrally build and manage decision logic across different solutions and landscapes

Rapidly build and extend decision logic for SAP and non-SAP applications with managed APIs

## Business rules usage patterns

### Extension applications

that require business logic to vary and remain outside the application lifecycle

- A cloud-native application built side-by-side with an SAP solution, e.g., SAP S/4HANA
- Invokes the rule service via API

### Human-centric or system-centric processes

that require decision logic to be isolated from the process flow logic

- A cloud **workflow** or **integration** flow process that extends or integrates an SAP solution
- Workflow or integration flow service task invokes the rule service via API

### Core business processes for in-app extensions

that require rule-based field calculations and derivations and a controlled environment

- SAP back office core processes like available-to-promise, financial reporting in SAP S/4HANA
- SAP front office customer-facing processes like Marketing Campaign Score Recommendation in SAP CX

### Analytical decisions

that require executions on mass data typically stored in an agile data mart

- Agile data mart refers to a repository of data gathered from operational data originating from transactional systems and other sources
- Business rules are pushed down to SAP HANA to leverage faster execution of analytical rules on mass data

## Managing decisions with business rules

### Advanced features and recent updates

- Version management
- Project hierarchy
- Decision orchestration
- Globalization
- Geospatial rules

- New expression types: Time & Duration, For Each, Currency Conversions, Update, Append, Select, Is Initial, etc.
- View audit logs in Audit Log Viewer for the Cloud Foundry environment
- New prepackaged content in SAP API Business Hub with standard content publication guidelines

### Key learnings

- Empower business policy owners to automate decisions outside any SAP or non-SAP applications using business rules in SAP Workflow Management
- Enterprise rule model and central decision management to manage rules centrally across different platforms, generating low operation and maintenance costs
- Authoring and runtime APIs to integrate and extend business logic with processes across various SAP and non-SAP applications

## What's next?

In the next unit, you'll learn:

- How to author and deploy business rules from the Manage Rule Projects application
- How to consume business rules using the runtime API in SAP API Business Hub

Managing decisions with business rules

Week 2: Process Flexibility and Business Rules

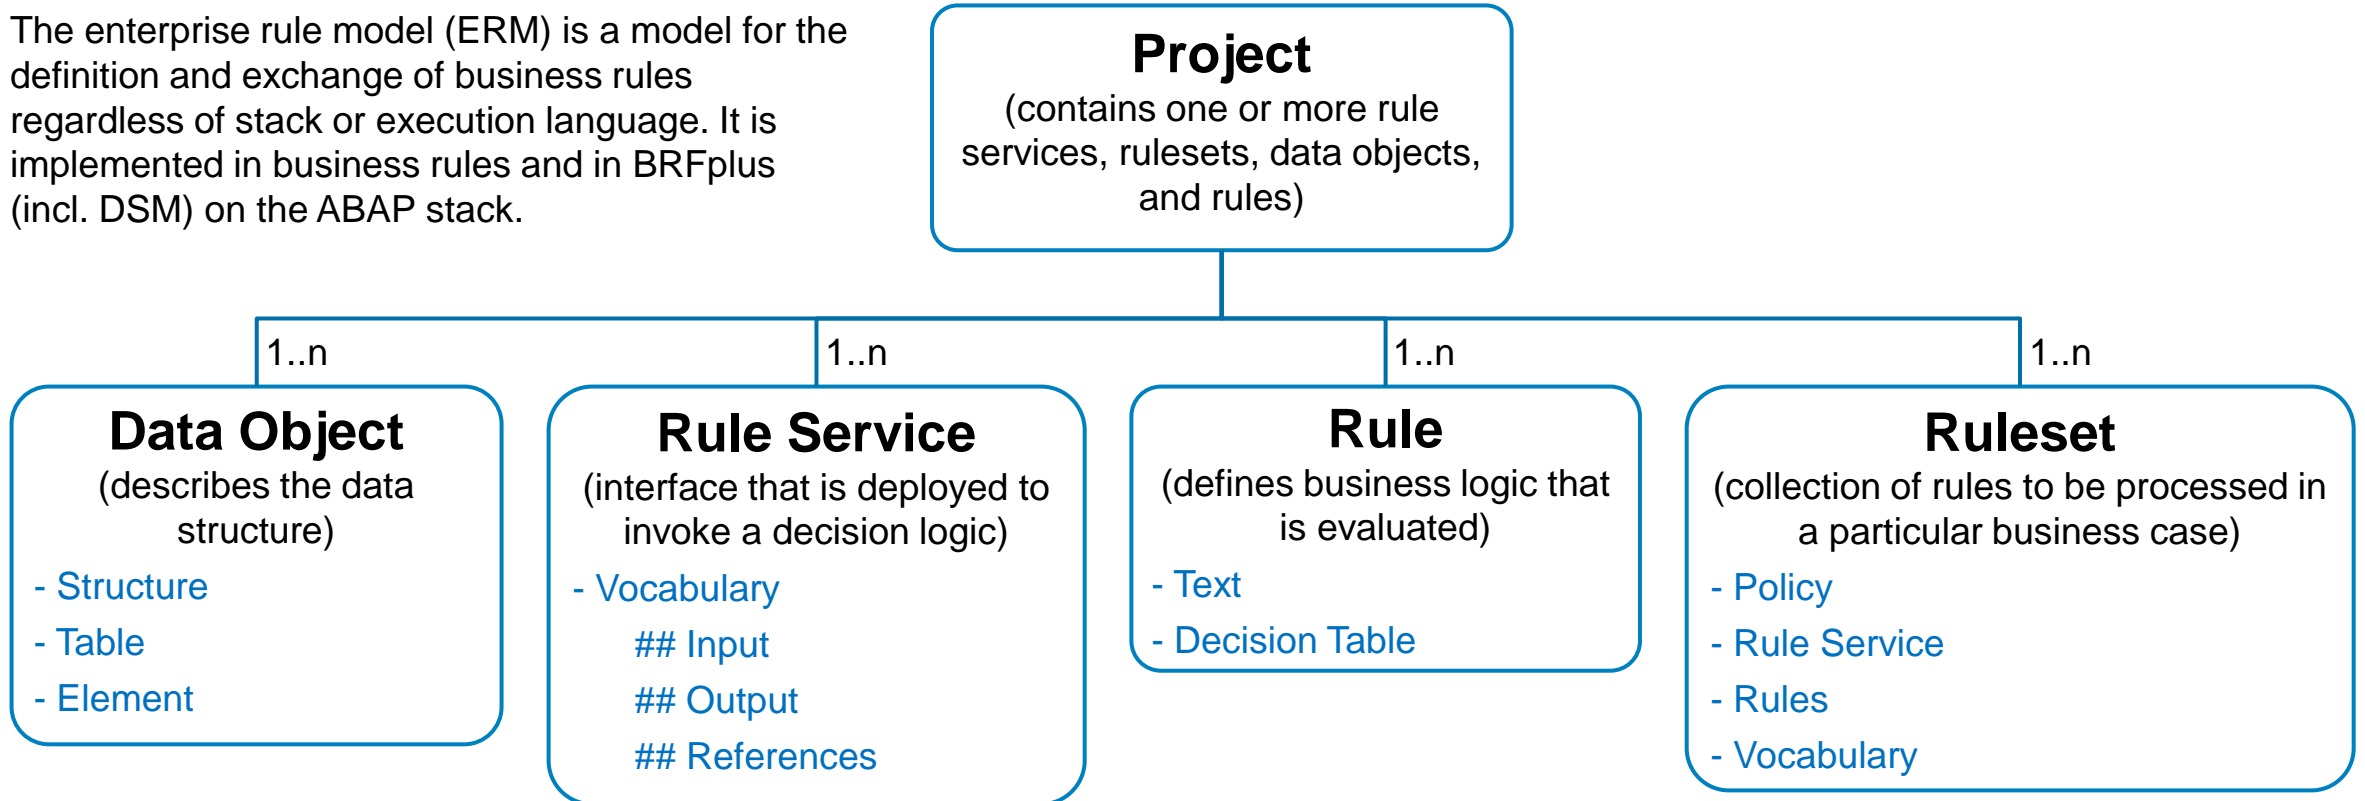

## **Unit 3: Developing Business Rules**

## Business rules – the bigger picture

# Enterprise rule model – overview

The enterprise rule model (ERM) is a model for the definition and exchange of business rules regardless of stack or execution language. It is implemented in business rules and in BRFplus (incl. DSM) on the ABAP stack.

- Vocabulary is defined using data objects
- Import the vocabulary from backend SAP S/4HANA systems

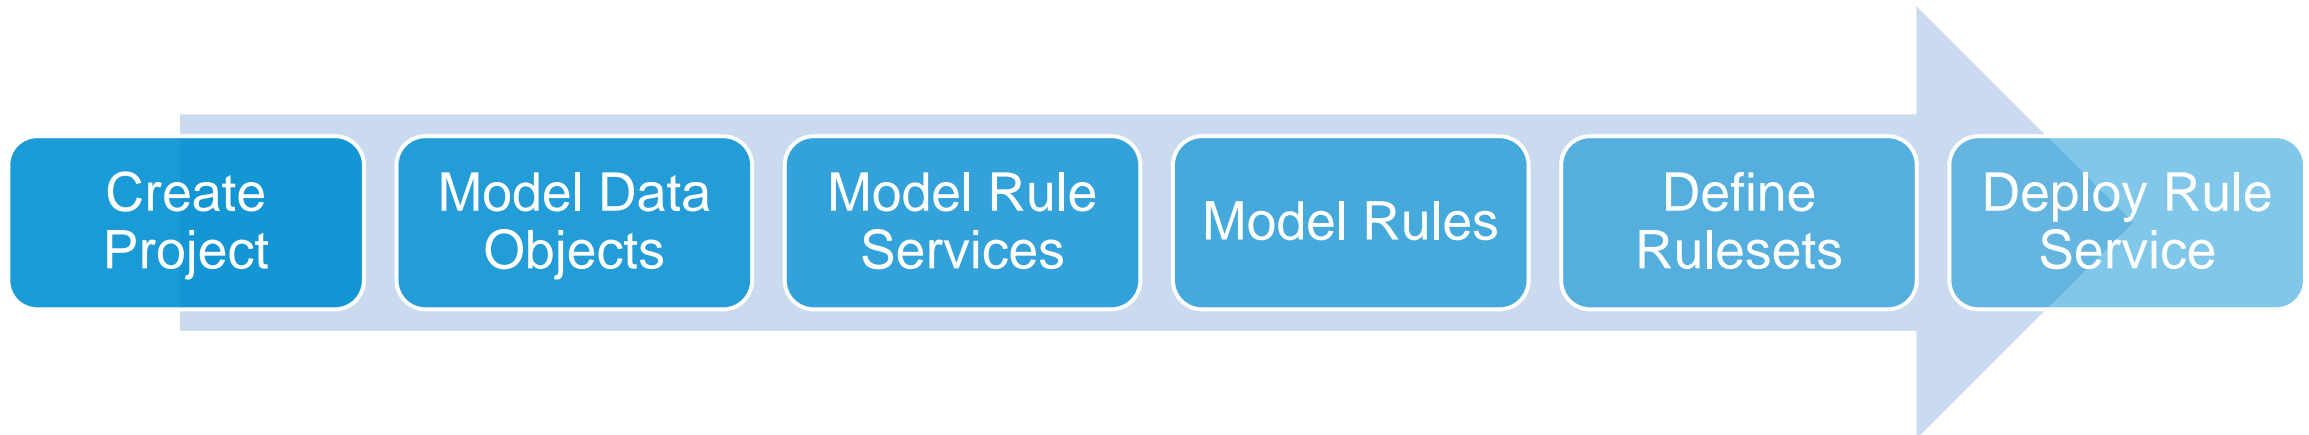

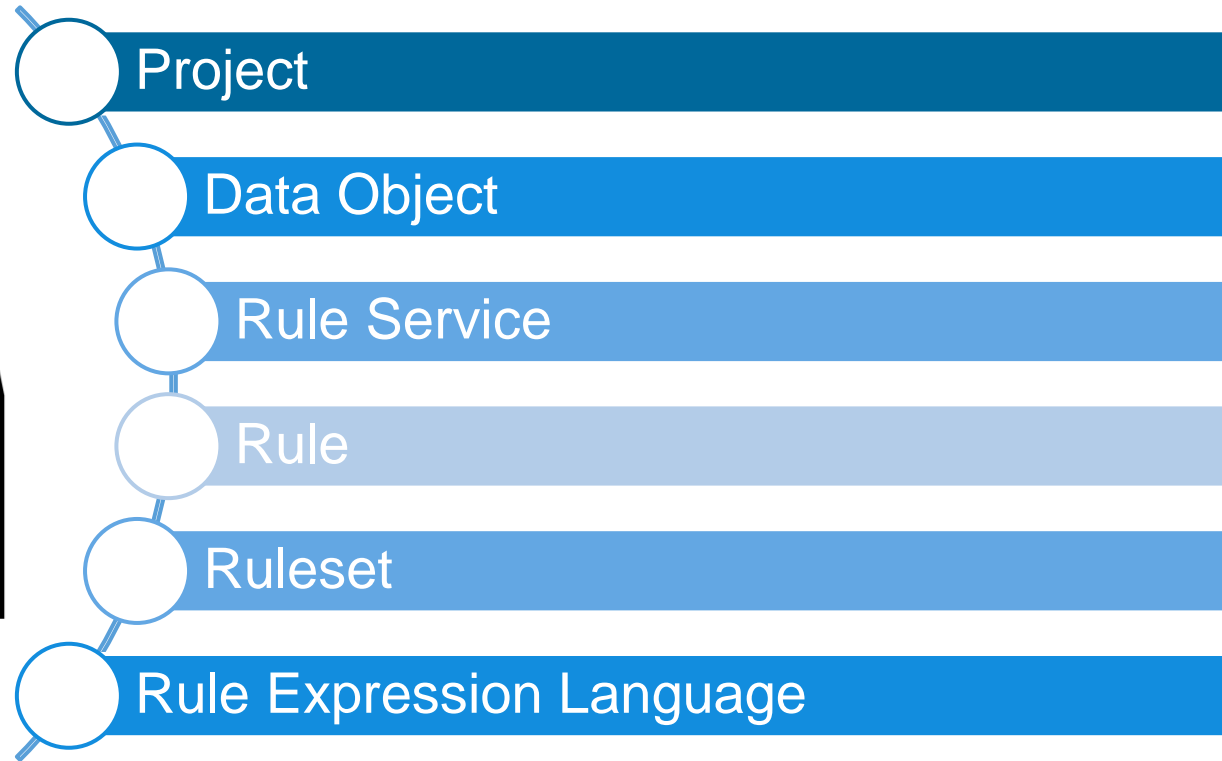

- Rule service defines inputs, results and other data objects
- Application calls rule service to invoke business rules

- A rule captures decision or business logic using rule expression language
- Decision table and text rule format is supported

- A ruleset contains one or more rules
- Each ruleset refers to one rule service
- Aggregation and orchestration policy is supported for different needs

## Modeling terms and concept

**Application  
Developer**

## Enabling decision management with centralized rule authoring and governance capabilities

### Manage Rules Application to author and manage your rules

- Author and manage business rules
- Validate and activate rules
- Create and manage versions
- Define and extend vocabulary and project
- Build rules on geospatial data
- Enable rule flow by decision orchestration
- Globalization available in 6 languages
- New expression language with enhanced modeling experience
- Rich expression function library
- Direct deployment of rules service to different runtimes (SAP HANA, SAP S/4HANA)

### Business Rules in SAP API Business Hub

- Business rules runtime and repository APIs can be discovered from SAP API Business Hub
- Consume repository APIs to create and manage enterprise rules models
- Consume runtime APIs to invoke business rules
- Sample and accelerator content
- New [guidelines](#) for publishing digital content

## Key learnings

- Web-based SAP Fiori application for authoring and managing business rules
- Common enterprise rule model to author business rules across different platforms
- Direct deployment to different systems like SAP BTP, SAP HANA, SAP S/4HANA
- Invoke business rules from application and processes by using APIs

Developing business rules

## What's next?

In the next unit, you'll learn:

- How to extend business rules in SAP S/4HANA using SAP BTP

## Developing business rules

Week 2: Process Flexibility and Business Rules

## **Unit 4: Connecting Your Business Rules with SAP S/4HANA**

## Business rules usage patterns

### Extension applications

that require business logic to vary and remain outside the application lifecycle

- A cloud-native application built side-by-side with an SAP solution, e.g., SAP S/4HANA
- Invokes the rule service via API

### Human-centric or system-centric processes

that require decision logic to be isolated from the process flow logic

- A cloud **workflow** or **integration** flow process that extends or integrates an SAP solution
- Workflow or integration flow service task invokes the rule service via API

### Core business processes for in-app extensions

that require rule-based field calculations and derivations and a controlled environment

- SAP back office core processes, like available-to-promise, financial reporting in SAP S/4HANA
- SAP front office customer-facing processes like Marketing Campaign Score Recommendation in SAP CX

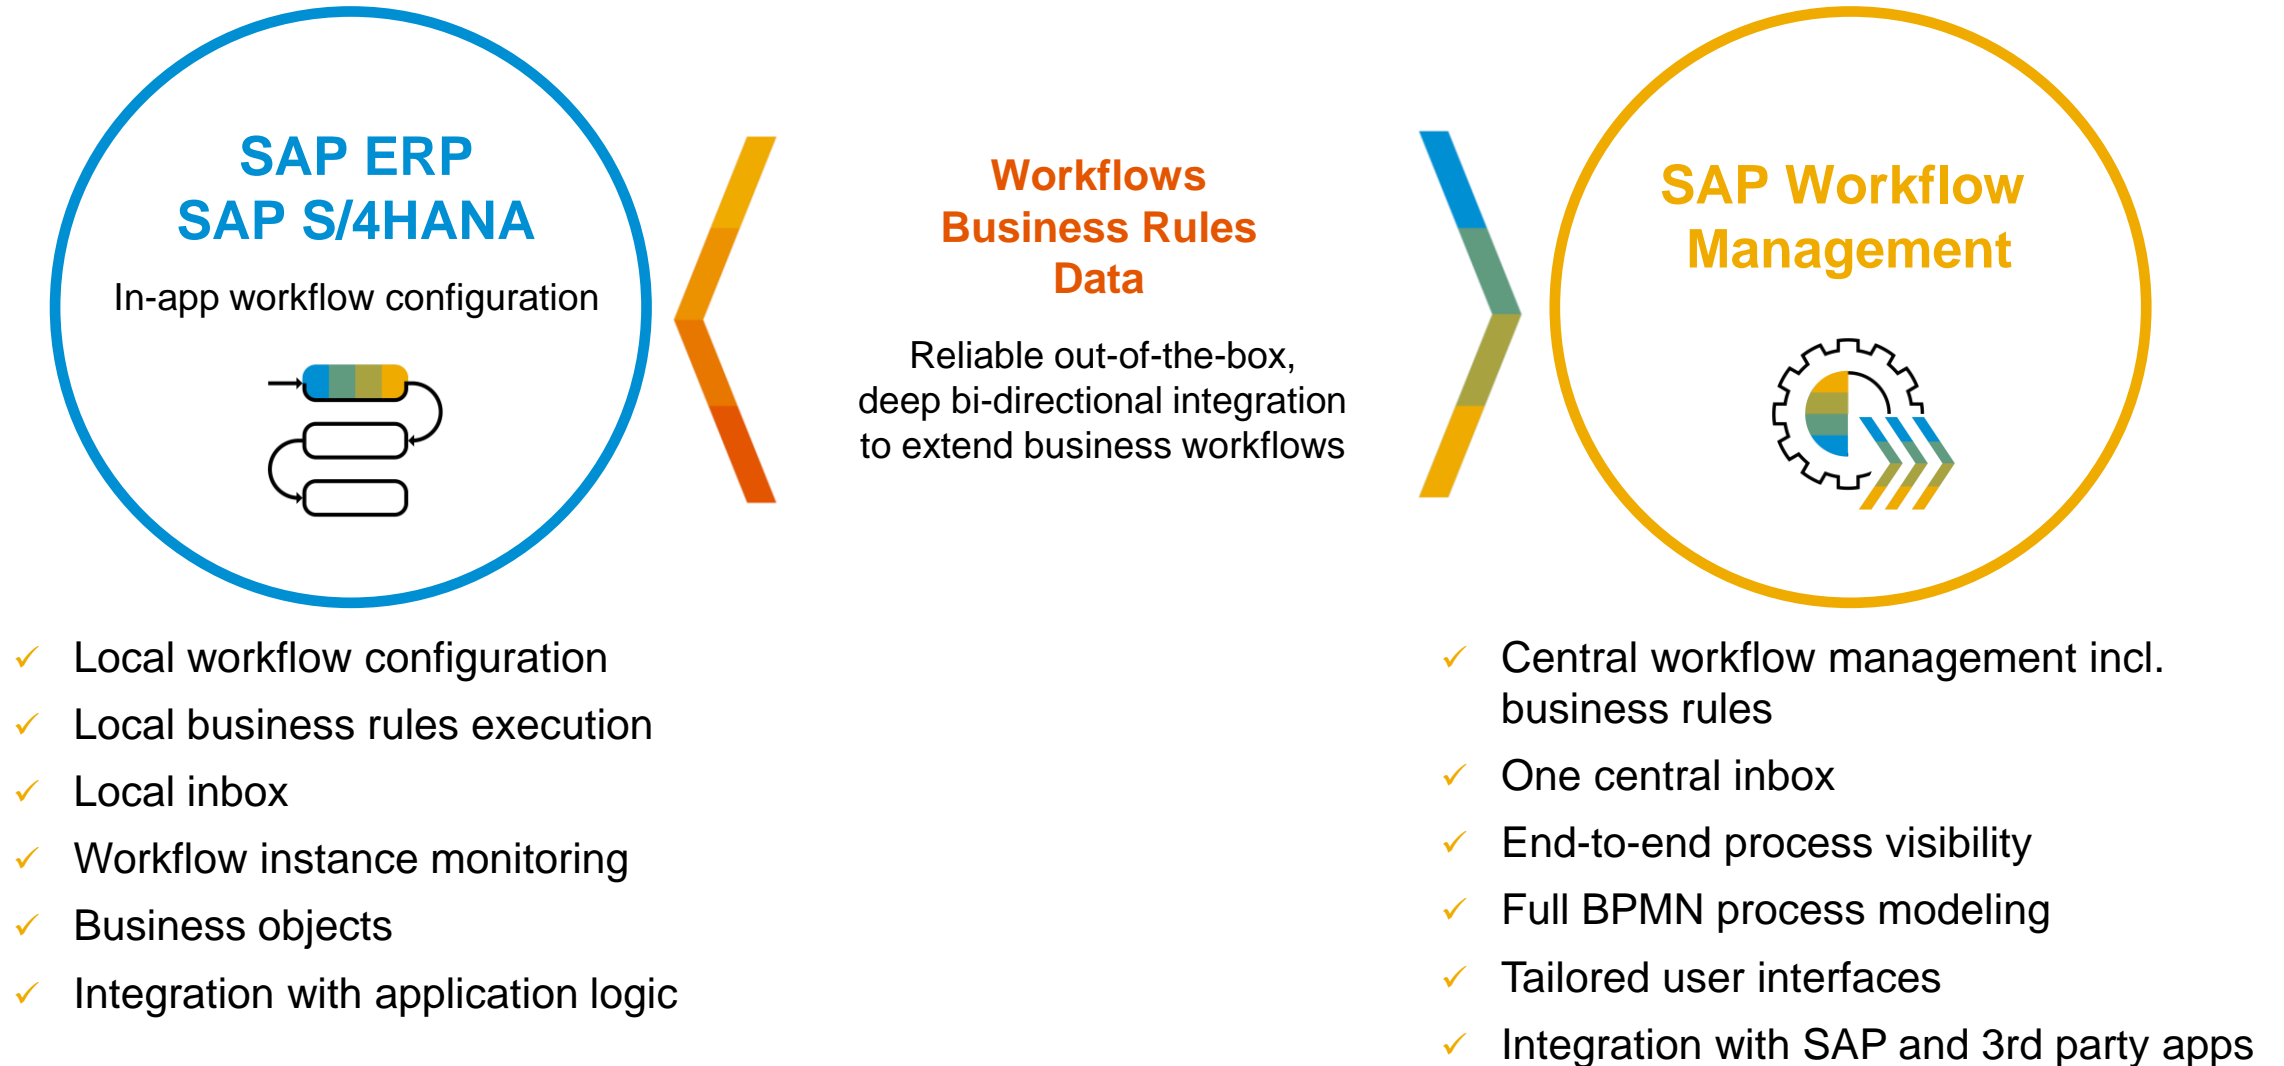

### Analytical decisions

that require executions on mass data typically stored in an agile data mart

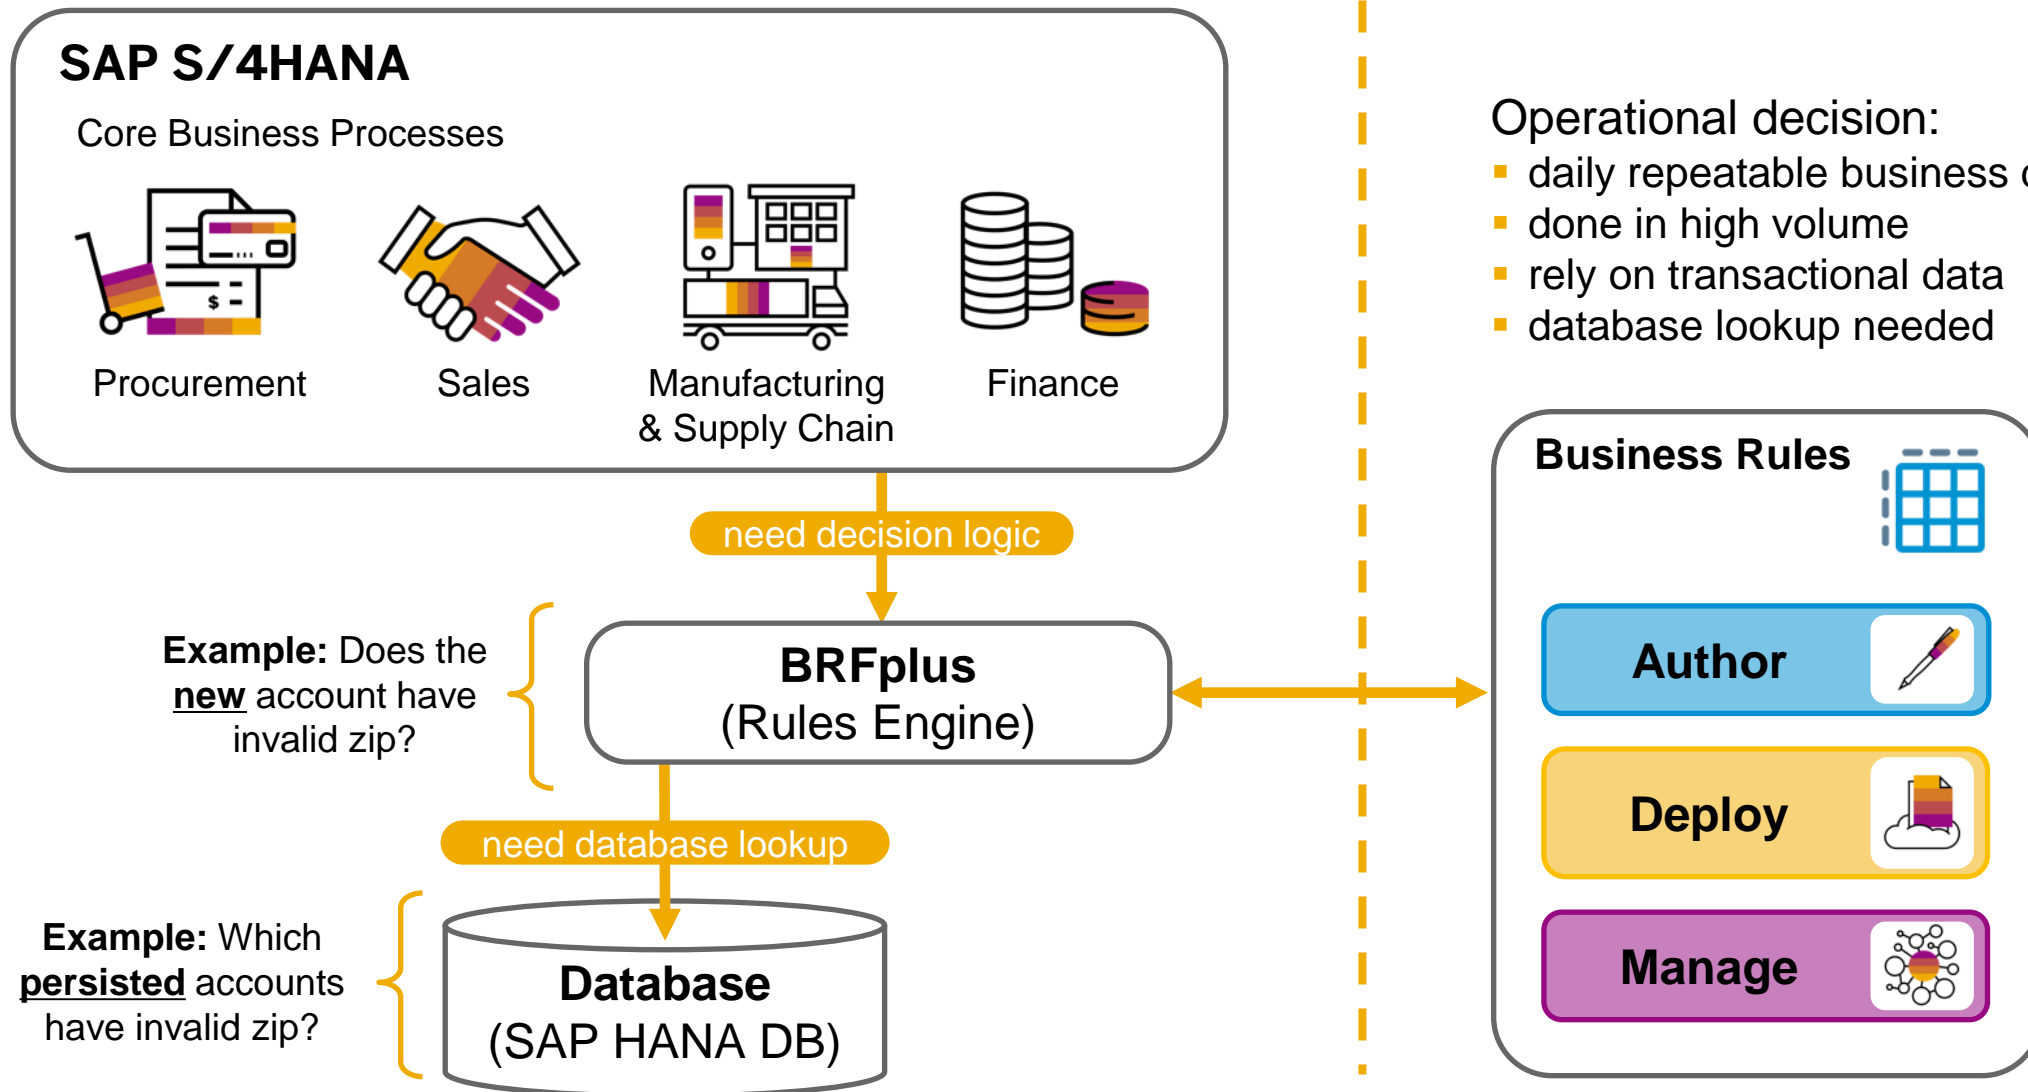

- Agile data mart refers to a repository of data gathered from operational data originating from transactional systems and other sources
- Business rules are pushed down to SAP HANA to leverage faster execution of analytical rules on mass data

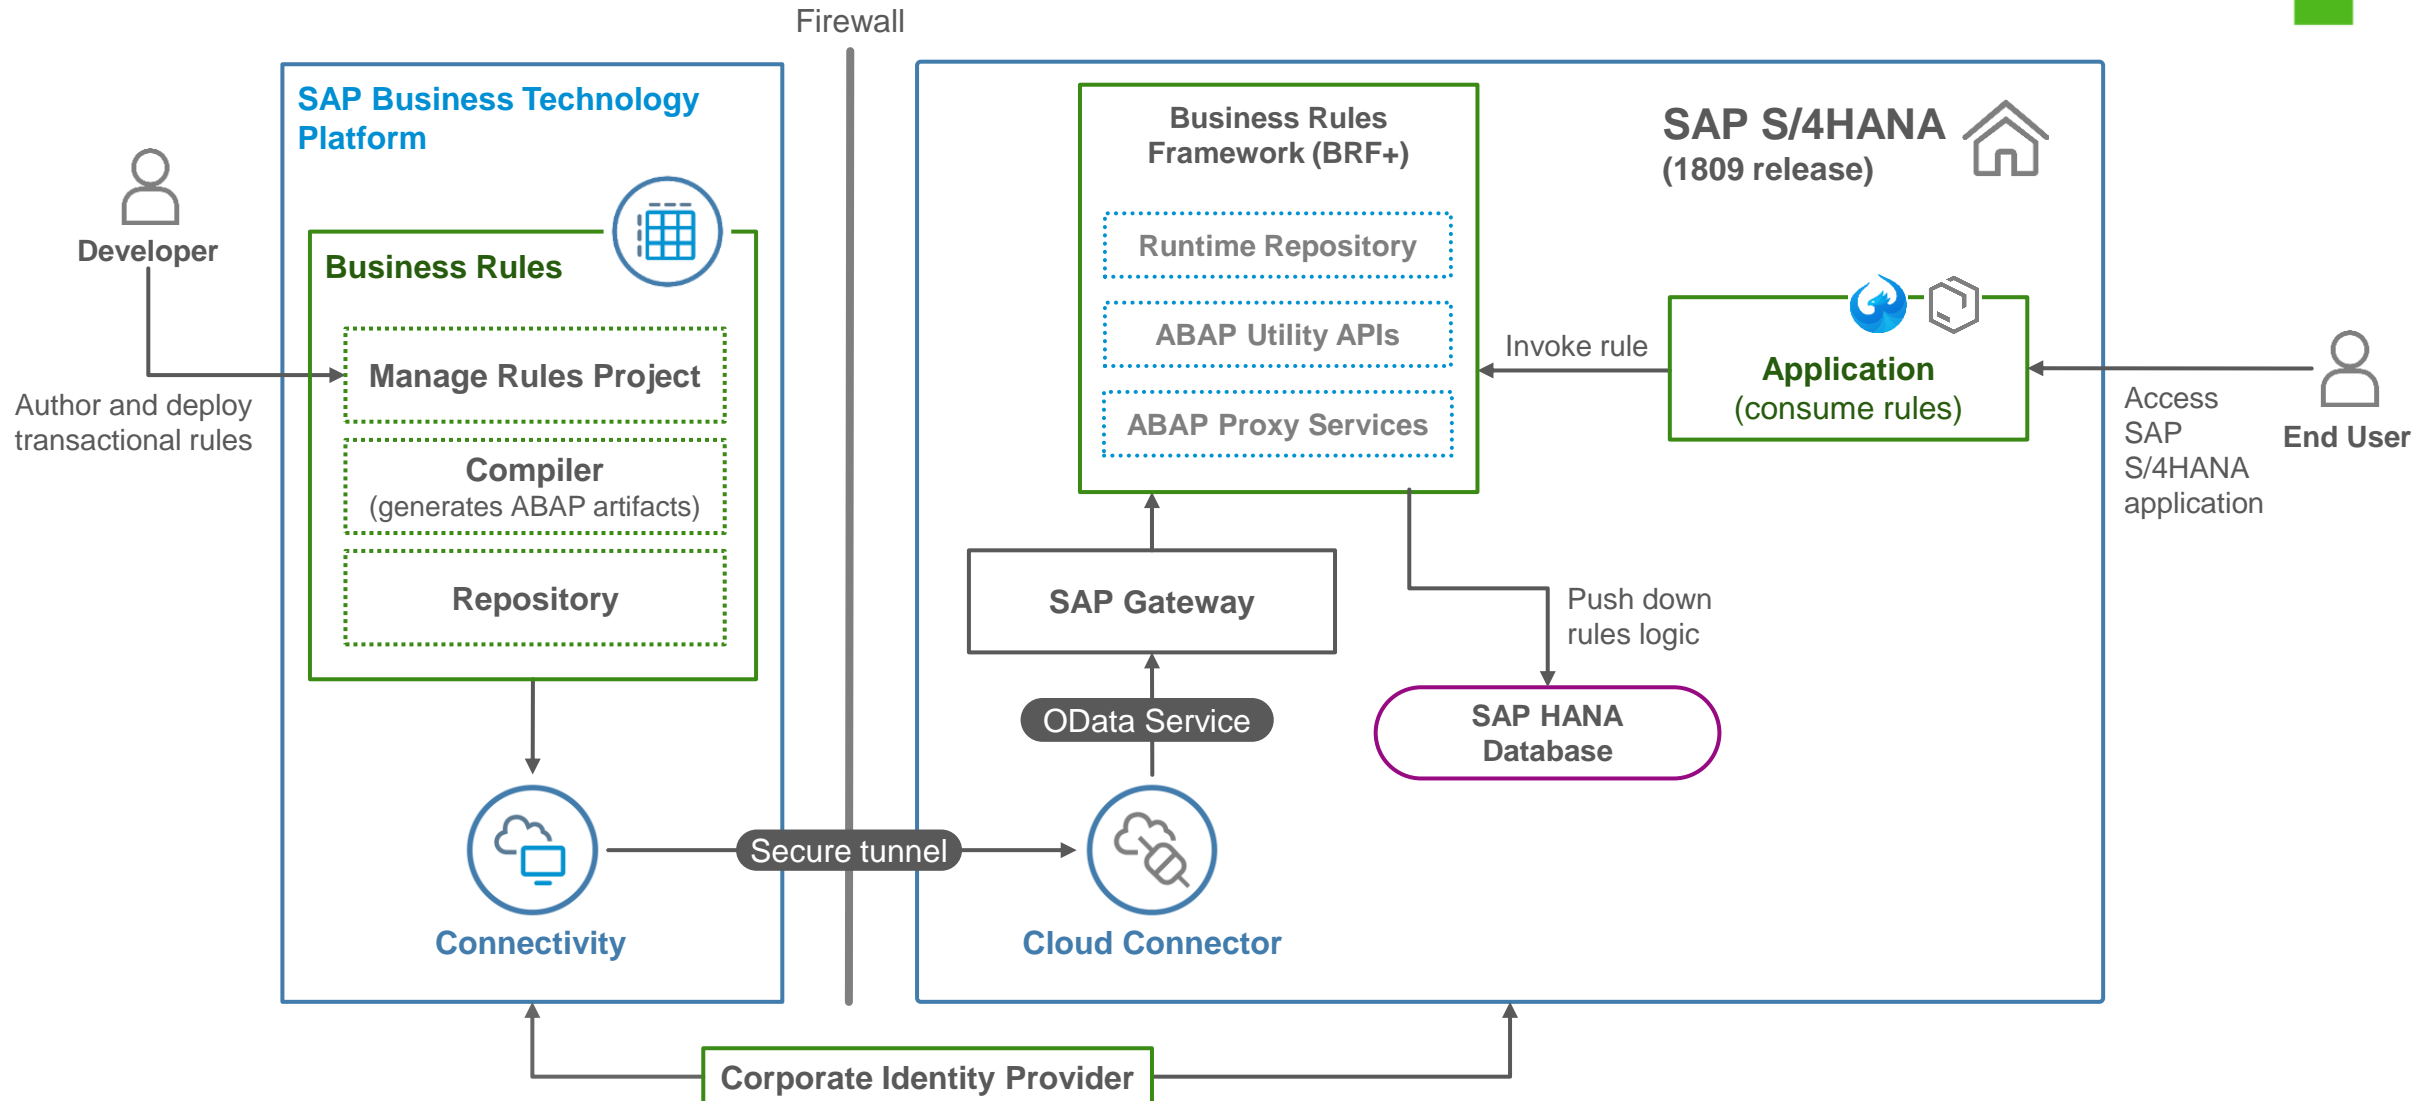

## SAP S/4HANA and SAP ERP extensibility – overview

## Recipe 3: Operational decisions in core business processes

## Recipe 3: In-app extensibility in SAP S/4HANA

# Connecting your business rules with SAP S/4HANA

## Administrative tasks (1/2)

1

Register the ERM gateway service in SAP S/4HANA system

**Activate and Maintain Services**

Service Catalog
